Outlook to EML

MailsDaddy Software

Difference in PST & EML

The PST file only supports Microsoft Outlook while EML data supports Windows Live Mail, Thunderbird, Outlook Express, etc.

The user cannot open Outlook email in Thunderbird, Live Mail and various others.

The PST file supports all data items such as email, contact, calendar, function, etc., on the other hand, EML data file only supports email and attachment.

How to convert Outlook to EML?
